TEXTE ANGLAIS

Français :

Nous sommes ici afin de vous présenter un sujet d'actualité : l'online learning.

Je suis Kévin Iodovicci, je vais vous expliquer ce qu'est l'online learning et ou est ce que l'on peut le faire.

Zinédine vous parlera des avantages et des inconvénients

Et pour finir, Camille conclura par des exemples pratiques, la pertinence de ce sujet et notre avis général.

Depuis la pandémie du Covid-19 et les périodes de confinement, l'online learning a explosé en popularité. Que signifie réellement apprendre en ligne ? Pourquoi ce mode d'apprentissage a-t-il pris une telle ampleur ? Nous allons répondre à toutes ces questions.

L'apprentissage en ligne est l'ensemble des solutions et moyens permettant l'apprentissage sur internet.

Cela veut donc dire que nous pouvons nous former sur de la cuisine, de l'informatique, ou de la comptabilité.

L'online learning repose sur des plateformes numériques comme : Zoom, Microsoft Teams, moodle, youtube, openclassrooms, w3schools et plein d'autres.

Maintenant, nous savons ce qu'est online learning et comment cela fonctionne. Interessons nous a ses avantages et ses inconvénients pour cela zinédine va vous en parler

Anglais :

We're here to talk to you about a hot topic: online learning.

I'm Kévin Iodovicci, and I'm going to explain what online learning is and where you can do it.

Zinédine will tell you about the advantages and disadvantages.

And finally, Camille will conclude with some practical examples, the

relevance of this subject and our general opinion.

Since the Covid-19 pandemic and the periods of confinement, online learning has exploded in popularity. What does online learning really mean? Why has this method of learning taken off to such an extent? We're going to answer all these questions.

E-learning is all the solutions and resources available for learning on the Internet.

This means that we can learn about cooking, computing or accounting. Online learning is based on digital platforms such as Zoom, Microsoft Teams, moodle, youtube, openclassrooms, w3schools and many others.

Now we know what online learning is and how it works. Let's take a look at its advantages and disadvantages, and Zinedine will tell you all about them.

Camille :

Practical examples and relevance Thank you Zinedine. Let's look at a few examples of use to illustrate e-learning. During the pandemic, for example, many schools and universities used tools like Zoom or Teams to organise distance learning courses. In the professional world, companies offer ongoing training on a variety of platforms. And in our daily lives, applications like Duolingo make it fun to learn a new language. So is it relevant today? Yes, absolutely. Even after the pandemic, e-learning is still widely used, especially in an increasingly connected world. [Conclusion] To conclude, e-learning has transformed the way we learn. It provides unique opportunities, but also presents challenges. What do we think? We think it's an important step forward, but it needs to be used with care. Do we use this service? Yes, for courses, meetings and training. Relevance? Without a doubt, but it depends on the context and needs. Evolution? There's no doubt that online learning, already an evolution in itself, will continue to advance with emerging technologies like VR headsets and AI, making it even more immersive and tailored to individual needs.
